

"Replace this text with your text and replace this picture with some other. It is always preferred that you match your text with a picture of some sort because just-text strikes readers as a task whereas a picture provides a hanger that makes it easier for readers to digest and remember. Order of the <...> </...> tags is important."

IMAGE-RIGHT

"Thanks. I can add my own pictures and adjust the background and sizes as I like. Images fit best when 1/3 or 2/5 or 1/2 of total box width."

IMAGE-LEFT

"Get the most out of your box presentations with this code - the half monty combo."

IMAGE-RIGHT + CAPTION

A whole lotta value for a whole lot less

"Captions are a big help in providing a reference for a picture when you need to emphasize locations or time of year."

IMAGE-LEFT + CAPTION

Use this as a content template for the entire site

* HEADLINE * HEADLINE * HEADLINE * HEADLINE *

"Make HEADLINES! It is always preferred that you match your text with a picture of some sort because just-text strikes readers as a task whereas a picture provides a hanger that makes it easier for readers to digest and remember. Order of the <...> </...> tags is important."

IMAGE-RIGHT + HEADLINE

* HEADLINE * HEADLINE * HEADLINE * HEADLINE *

"Good idea! Nothing like a headline to focus the topic. Also makes it a lot easier for people to match their interest."

IMAGE-LEFT + HEADLINE

* HEADLINE * HEADLINE * HEADLINE * HEADLINE *

"Get the most out of your box presentations with this code - the full monty combo."

IMAGE-RIGHT + HEADLINE +
CAPTION

A whole lotta value for a whole lot less

* HEADLINE * HEADLINE * HEADLINE * HEADLINE *

"YES! This combination is the play of all plays. I love it. This format will hilite the best info and offers i have. Thanks for the code."

IMAGE-LEFT + HEADLINE + CAPTION

Use this as a content template for the entire site

The code presented here is simple, fast, and cost less. It is highly adaptable and easily tailored. Some coders will attempt to

- >> push 3rd party javascript
- >> push wallstreet high-end code
- >> push a hosting trap with non-transferable code

Beware. Much javascript and hosting is actually designed to gather information about your business activity, customer traffic, and public interest on your site by a variety of means. But in reality, that information can be made available to wallstreet sharks or other competitors who want you out of business because you can price compete or because you are making too much.

If you are not going to code your site yourself, find someone who appreciates the simplicity, versatility and transportability of this code before settling for something else. Good coders just want to earn your business - not that there's anything wrong with that..
